

JOHN FIG 70

Safety & Relief Valves

The John Fig 70 Safety Relief Valve incorporates a top-guided design with unobstructed seat bores and high lift ability. The bronze valve body can be supplied with resilient trim or metal trim based on requirements. The John Fig 70 is suitable for air/gas, steam/hot water (above 100°C) and liquid applications. For inline checking, test levers and the option of a sealed dome can be supplied for service conditions with the requisite of a pressure-tight seal on the discharge side, e.g., liquid service with enclosed discharge.

Other Gases

For application of the valve for other compatible gases, the sizing details above can be used. The valve capacity will change depending on the specific gravity of gas. To calculate the gas capacity, multiply the valve air capacity by $1/\sqrt{SG}$. SG = specific gravity (relative to gas = 1).

Useful Conversions

Nm³/h = 1/sec X 3.60

SCFM = 1/sec X 2.12

*Minimum Overpressure = 0.07 Barg at set pressure less than 1.0 Barg
